

ECG60 CHARGE GENERATOR

The **ECG60** charge generator generates adjustable high voltage between 5 and 60KV with a maximum current of 3.0mA, it can work in constant voltage or constant current mode. Its controls are very intuitive and therefore easy to use by the operator. In addition, the generator can be remotely controlled via its remote analog control function, it can have positive or negative charge, and has 2 high voltage outputs.

| ECG60 | |
|---------------------------|--|
| Frame material | Powder coated metal |
| Weight | 8 kilograms |
| Connections | two |
| Voltage / current reading | Digit display |
| Operating temperature | 0 - 60 ° C |
| Primary voltage | 24 V DC / 90-264 V AC 47/63 Hz |
| Energy consumption | 200 watts max. |
| Secondary output | 5-60 kV DC |
| Secondary current | 0 - 3.0 mA |
| Polarity | Positive or negative |
| Characteristics | Voltage and current control, overload display Analogue remote control function, keyboard commands |
