

IONIZING NOZZLES AN-01

Compressed-air ionizing nozzles have a double function, cleaning the surface of interest and eliminate existing electrostatic charges.

Ionizing nozzles are employed where installation conditions are critical, especially in confined spaces.

Our ionizing nozzles can have multiple configurations and can be connected in series even in circular shape according to customer's needs.

Like other active anti-static equipment, also ionizing nozzles must be connected to an anti-static power supply by means of a high-tension cable and to compressed air via a common 1/8" mm air hose. We recommend the use of a 5 micron or smaller air filter in such a way as to prevent the nozzle from coming into contact with impurities and moisture.

AN-01	
Working distance	Until 1000 mm.
Power supply	AF2
Emitters	Stainless steel
Ambient temperature	0°C – 70°C
Air consumption	a 3 bar, 190lit/min
Max pressure	7 bar
